## Section 1. Introduction

## Background

The Yolo County Flood Control \& Water Conservation District (YCFC\&WCD or District) was created in 1951 by the California Legislature as an independent special district to manage water resources in Yolo County. The District provides a wide range of services to its customers, including surface water delivery, groundwater recharge, flood control, recreation, and power generation. The District currently manages a small hydroelectric plant, two reservoirs, over 160 miles of canals and laterals, and three dams (Cache Creek Dam [Clear Lake's outfall], Indian Valley Dam, and Capay Diversion Dam). The District boundary covers 218,000 acres of Yolo County, including the cities of Davis, Woodland, and Winters, the towns of Capay, Esparto, and Madison, and other small communities within the Capay Valley.

The District supplies surface water to nearly 55,000 acres of cropland for agricultural use during the growing months from April to October, and the District's canal system has the potential to serve over twice as many acres of cropland.

The District performs capital improvements on the Capay Diversion Dam and the downstream irrigation canal system. Capital improvements within the District's service area preserves water availability and long-term system reliability for current and potential water users.

## Purpose of Engineer's Report

This Engineer's Report describes, in detail, the methodology for levying an assessment (Proposed Assessment) upon parcels that receive special benefit from the Capay Diversion Dam and the downstream canal system. The Proposed Assessment is intended to provide the District with sufficient funding to complete the capital improvements for both infrastructure availability and routine capital efforts.

## Report Organization

This report is divided into six sections:
Section 1 Introduction, provides the background and purpose of this Engineer's Report.
Section 2 Authority and Process, outlines the authorization and process for imposing the proposed special benefit assessment.

Section 3 Proposed Services and Funding Plan, describes the funding plan for capital improvements to the irrigation water transmission and distribution system at and downstream of Capay Diversion Dam.

Section 4 Assessment Methodology, details the methodology for levying an assessment that is proportional to the special benefits received by each parcel being assessed. All tables and equations referenced in the report are included in this section.

Section 5 Assessment Administration, describes the annual assessment administration process.

Section 6 Conclusion, provides the special benefit findings and certification by the Assessment Engineer. All figures referenced in the report are included after this section.

## Section 2. Authority and Process

The District was created by special act of the California Legislature (District Act, Water Code App., Sec 65-1). Under the District Act, the District is empowered to form zones within the district and levy assessments on land within those zones (Water Code App., Sec 65-15-65-15.5) and may fix rates and charges "...for water, service and benefit from its operations..." to pay operating expenses, repairs and depreciation, interest on bonded debt, principal on bonded debt, and for constructing, maintaining, operating, and purchasing or leasing works that provide that water service and benefit (Water Code App. Sec 65-27.5, subd. (a)-(e).).

As further detailed in Section 3, the Proposed Assessment will finance capital improvements to the District's agricultural water transmission and distribution system at and downstream of Capay Diversion Dam.

In addition, all special benefit assessments must also comply with Article XIIID of the State Constitution, commonly referred to as Proposition 218, and the Proposition 218 Omnibus Implementation Act (California Government Code $\S 53750$ et seq.). These requirements outline the process for imposing the Assessment, including the requirement that this Engineer's Report documents the special benefits conferred by the service provided, the process for imposing the Assessment, and property owner approval through a balloting process.

This Engineer's Report has been prepared to:

1. Contain the information required pursuant to California Government Code §54716(a), including;
a. a description of the services proposed to be financed through the revenue derived from the Assessment;
b. a description of each lot or parcel of property to be subject to the Assessment;
c. the amount of the Proposed Assessment for each lot or parcel;
d. the basis of the Assessment; and,
e. the schedule of the Assessment;
2. Determine the special benefits received from the services provided by the District by benefiting properties; and,
3. Assign a method of apportioning the Assessment to benefiting properties.

Following submittal of this report to the District Board of Directors (Board) for preliminary approval, the Board may, by resolution, call for an assessment ballot proceeding and public hearing on the establishment of the Proposed Assessment.

If the Board approves such a resolution, the secretary of the Board will initiate the notice, protest, and hearing procedure required by the Proposition 218 Omnibus Implementation Act (California Government Code §53750 et seq.) and Article XIIID. A notice and assessment ballot will be mailed to property owners within the Proposed Assessment boundary. Such notice would include a description of the services to be funded by the Proposed Assessment, the Proposed Assessment amount for each parcel owned, the duration of the Assessment, an explanation of the method of voting on the Assessment, and the name and telephone number of the person designated by the Board to answer inquiries regarding the protest hearing. Each notice would also specify the date, time, and place of the public hearing and a summary of the ballot return procedures.

Finally, each notice would include a ballot upon which the property owner can mark her/his approval or disapproval of the Proposed Assessment, as well as affix her/his signature, and a postage prepaid envelope in which to return the ballot.

Property owners will have at least 45 days to return the assessment ballots. On the last day of the balloting period, the public hearing will be held for the purpose of receiving public testimony regarding the Proposed Assessment. At the public hearing, property owners will have the opportunity to address the Board about the Proposed Assessment. Ballots must be submitted prior to the close of the public hearing. Property owners may also revise previously submitted ballots prior to the close of the public hearing.

If the votes received in favor of the Assessment outweigh the votes received opposing the Assessment (weighted by the proportional financial obligation of the property for which the ballots are submitted), the Board may continue with the process of imposing the Proposed Assessment and its future levy. If the assessments are so confirmed and approved by the Board, the Assessment roll would be submitted in future years to the County Auditor Controller for inclusion on the secured property tax rolls, or the District may directly bill the property owner for the Assessment pursuant to the Proposition 218 Omnibus Implementation Act (California Government Code $\S 53750$ et seq.). As outlined in California Government Code $\S 53739$, the Board may levy the Assessment in future years without conducting a new ballot proceeding so long as the Assessment is within the stated inflation-adjusted Assessment Rate authorized by the original balloting proceeding.

## Section 3. Proposed Services and Funding Plan

The District provides the following services in order to provide reliable irrigation deliveries to users downstream of Capay Dam:

1. Operate and maintain reservoirs,
2. Manage water releases from the reservoirs,
3. Operate the transmission and distribution system to deliver water to individual users,
4. Perform routine annual maintenance to the transmission and distribution system, and
5. Perform capital improvements to transmission and distribution system.

The first four services are required to coney water from the reservoirs, through the transmission and distribution, and for delivery to individual users. These services are funded by a combination of water use charges and general tax revenue and are not to be funded by the Proposed Assessment. The Proposed Assessment will only fund capital improvements, as further described below.

## Services Funded by the Assessment

The services to be funded by the Proposed Assessment include capital improvements to the District's facilities at the Capay Diversion Dam and the irrigation transmission and distribution system downstream of the dam (Services). The Services are necessary to ensure the system is available and reliable, long-term, and must be provided regardless of water actively flowing into the canal system. The District maintains a comprehensive capital asset list used to prioritize capital projects and facility maintenance activities. From this comprehensive list, the projects and activities identified in Table 1 were selected for budget setting purposes and are grouped into two categories:

1. Infrastructure Availability: These projects support the long-term reliability of the system to ensure irrigation water supply is available to all agricultural properties within the District, that currently or can reasonably receive water from the system now or in the future. These projects include major capital replacement and modernization of the Capay Diversion Dam, flumes, siphons, spills, and related infrastructure required to ensure water availability.
2. Routine Capital Improvement: These projects and activities ensure long-term, reliable operations of the system to deliver irrigation water to agricultural properties within in the District, that currently or can reasonably receive water from the system now or in the future. These projects include routine capital replacement and repairs to canals, gates and turnouts, checks and backups, drains, bridges, culverts, and crossings.

The proposed assessment may also fund additional projects identified in the future which are determined by the Board to be aligned with these two categories.

The District provides several services for its customers that are not part of this Proposed Assessment. The following are specific examples of activities not included in this Proposed Assessment: operation, maintenance, and improvements of its dams and reservoirs, regular annual operation and maintenance of the canals, conjunctive use of the system tied to groundwater replenishment, hydroelectric power generation activities, and flood control activities.

## Annual Budget for Services

Planning level costs and expected life spans have been estimated by the District for all projects and activities identified on the comprehensive capital asset list (see Appendix A). These costs reflect the District's current expectations, based on the District's historical costs and on its anticipated expenses. Although this is the best available information now, this list does not reflect all future projects the District might implement to provide the Services. The Board may elect to revise, update, or change this list of Capital Improvement Projects in the future, so long as it meets the description of Services and does not affect the total assessment as defined herein. These costs and expected life spans serve as the basis for developing an annual budget for the Proposed Assessment (Table 1) of \$955,000.

The annual project cost estimate for capital improvements considers the expected life, total cost, and a discount rate of $2.5 \%$. This calculation reflects a consolidated assumption of prior cost of financing and potential future cost of financing, as well as a recognition that certain activities will not require financing. Where only annual cost was provided in the comprehensive capital asset list, the budget assumes this annual cost provides adequate funding on a pay-go basis for the associated item. It should be noted that this budget was developed for the purpose of determining the annual revenue required for this proposed assessment. Future annual budgets approved by the District Board may vary from year to year according to actual anticipated expenses and revenues.

Table 1: Proposed Budget

## Project / Activity

## Estimated Cost [1] Expected Annualized Cost Life (Years) <br> [2]

|  |  |  |  |
| :--- | ---: | ---: | ---: |
| Capay Dam | $\$ 2,000,000$ | 25 | $\$ 108,000$ |
| Bladder Replacement | $\$ 350,000$ | 50 | $\$ 12,000$ |
| Bladder Failure Recovery (EAP) | 25 | $\$ 3,000$ |  |
| Winters Canal Headworks Controls Upgrade | $\$ 70,000$ | 25 | $\$ 4,000$ |
| West Adams Headworks Controls Upgrade | $\$ 80,000$ | 50 | $\$ 5,000$ |
| Headworks Culvert Extensions (WIN \& WEA) | $\$ 150,000$ | $\$ 0$ | $\$ 14,000$ |
| Headworks Trash Racks (WIN \& WEA) | $\$ 300,000$ | 30 |  |
| Headworks Gate Replacement (x14) | $\$ 280,000$ | 25 | $\$ 15,000$ |
|  |  |  |  |
| Winters Canal Flumes, Moore Siphon \& Salisbury Spill |  | 50 | $\$ 17,000$ |
| Lamb Valley Slough Flume | $\$ 500,000$ | 50 | $\$ 17,000$ |
| Almondale Slough Flume | $\$ 500,000$ | 50 | $\$ 17,000$ |
| Cottonwood Slough Flume | $\$ 500,000$ | 50 | $\$ 17,000$ |
| Fredericks Flume | $\$ 500,000$ | 50 | $\$ 17,000$ |
| Walnut Siphon | $\$ 500,000$ | 50 | $\$ 17,000$ |
| Moody Slough Siphon | $\$ 500,000$ | 50 | $\$ 105,000$ |
| Moore Siphon | $\$ 3,000,000$ | 50 | $\$ 3,000$ |
| Salisbury Spill | $\$ 100,000$ | 50 |  |
|  |  |  | $\$ 584,000$ |
| Canal Distribution System |  | $\$ 44,000$ |  |
| Gates/Turnouts (655) |  | $\$ 180,000$ |  |
| Checks/Backups (283) |  | $\$ 100,000$ |  |
| Canals (160 miles) |  | $\$ 10,000$ |  |
| Drain-intos (282) |  | $\$ 250,000$ |  |
| Bridges \& Crossings (224) |  |  |  |
| Total |  | 55,000 |  |

[1] Estimated costs are from the Comprehensive Capital Asset List for Prioritization. See Appendix A.
[2] Assumes a discount rate of $2.5 \%$ for the purposes of annualizing total estimated costs, where provided, to account for potential financing and timing uncertainty. Rounded down to nearest $\$ 1,000$.

## Section 4. Assessment Methodology

## General Discussion

## Requirements of Proposition 218

To levy an assessment for a property-related service, such as the capital improvements to be funded under this assessment, Proposition 218 requires the local agency to:

- Separate the general benefits from the special benefits conferred on a parcel;
- Identify the parcels that have special benefits conferred on them by the facility and/or service;
- Calculate the proportionate special benefit for each parcel in relation to the entirety of the expenses being funded; and
- Ensure the assessment does not exceed the reasonable cost of the proportionate special benefit conferred on each parcel.

The following methodology has been developed in accordance with these requirements.

## Special Benefit vs. General Benefit

Proposition 218 requires any local agency proposing to increase or impose a special assessment to "separate the general benefits from the special benefits conferred on a parcel." (Cal. Const. art. XIIID §4(a)). The rationale for separating special and general benefits is to ensure that property owners are not charged a special benefit assessment in order to pay for general benefits provided to the general public or to parcels outside the assessment district. Thus, a local agency carrying out a project that provides both special and general benefits may levy an assessment to pay for the special benefits but must acquire separate funding to pay for the general benefits. ${ }^{1}$ Further discussion regarding the determination of general benefit from the Proposed Assessment is located in Section 4.

A special benefit is a particular and distinct benefit over and above the general benefits conferred on real property located in the district or to the public at large. The total cost of the services must be apportioned among the properties being assessed based on the proportionate special benefit the properties will receive. Moreover, the governmental agency must demonstrate through a balloting process that the ballots submitted in opposition to the assessment do not exceed the ballots submitted in favor of the assessment, weighted according to the proportional financial obligation of the affected properties.

In this instance, the Services provide a special benefit only to those properties located within the District boundaries. Only properties located within the District boundaries have a right to receive surface water deliveries through District facilities, including those facilities comprising the Services. (Water Code App., Sec 65-3(q).) As noted above, special benefits are those "particular and distinct over and above general benefits conferred on real property located in the district or to the public at large." (Cal. Const. art. XIIID §2(i)). The

[^0]Services are a special benefit and not a general benefit because their benefits are only available to those agricultural lands located within the District boundaries and that, as further defined below, are connected or potentially may be connected in the future to the District's surface water delivery system.

Because the Services and facilities support agricultural activities of particular, identifiable parcels (including any appurtenant facilities or improvements) the benefits are provided directly to those parcels, and to none other. By contrast, general benefits provided to the public at large are discussed in terms of general enhanced property values, provision of general public services such as police and fire protection, and recreational opportunities that are available to people regardless of the location of their property. (See, e.g., Cal. Const. art. XIIID §§2(i), 6(2)(b)(5); Silicon Valley Taxpayers, 44 Cal. 4th 431. 450-456).

Further, Proposition 218 requires that public parcels be assessed if it receives a special benefit, and this special benefit is not considered a general benefit.

## Proposed Assessment Boundary

All agricultural parcels receiving special benefit, as further defined below, from the capital improvement projects to be funded by the Proposed Assessment are located within the existing District boundary. As determined by the Assessment Engineer, it is reasonable to conclude that those properties located downstream of the Capay Diversion Dam and within reasonable limits to the canal system receive special benefits from the availability of Services. The reasonable limits to the canal system are defined by the outer reach of the canals, so any parcel that meets the methodology requirements and resides within the District boundary may be subject to the Proposed Assessment. It's also understood that the canal system could be extended in the future within the District's jurisdictional area. Riparian and other water users located upstream of Capay Dam do not have access to the Services and do not benefit from these projects. The Proposed Assessment boundary therefore coincides with the District boundary and is displayed in Figure 1.

## Assessment Apportionment Methodology

## Overview

The methodology for apportioning the annual assessment is based on calculating the number of total benefit units for each parcel according to the special benefit received from the Services that comprise the projects and activities to be funded by the Proposed Assessment.

The assessment is apportioned to benefitting properties based on the following equation (Equation 1):

$$
E B U=\text { Assessed Acreage } \times B F
$$

Where:
EBU = Equivalent Benefit Units
Assessed Acreage $=$ Assessor's Parcel Acreage $\times \mathbf{8 0 \%}$
BF = Benefit Factor

## Parcel Characteristics

The assessment methodology utilizes the following parcel characteristics to calculate the quantity of Equivalent Benefit Units.

## Parcel Size \& Assessed Acreage

The size of the parcel is used to appropriately apportion the special benefit from the Services. The Assessment Engineer obtained parcel data from Yolo County Assessor's Office through ParcelQuest, a third-party data provider. The District recognizes that only the irrigable portions of agricultural properties receive a special benefit from the Services. Therefore, to determine the assessable benefit received by each parcel, the Assessed Acreage has been determined to be $80 \%$ of the assessor's parcel size acreage for the purpose of apportioning benefit. This determination is based on an analysis of available farm field data and assessor's data. For agricultural parcels larger than 10 acres within the Proposed Assessment boundary where farm field data is available, or parcels where the irrigable acres have been aerially measured by the Assessment Engineer, the average ratio of irrigable acres to gross parcel acres is approximately $85 \%$. For the purposes of determining the benefit to each parcel, a conservative ratio of $80 \%$ of the gross parcel acreage was applied to determine the quantity of irrigable acres for each parcel.

Where appropriate, the Assessment Engineer resolved significant discrepancies between parcel size and irrigable acreage using aerial photographs and measuring tools to confirm the irrigable acreage. In these cases, the Assessment Engineer set the Assessed Acreage equal to the measured acreage.

## Land Use Category

Any parcel that irrigates commercial crops is assumed to have an agricultural land use. Only parcels with an agricultural land use receive a special benefit from the Proposed Assessment because only these parcels would potentially benefit from the availability of surface water deliveries from the Services.

## Connection Status

The Assessment Engineer considered all agricultural parcels within the Proposed Assessment boundary. The Services rely on a gravity-fed transmission and distribution system and the benefit afforded is attributed to the Capay Diversion Dam and downstream canal system as previously described. Therefore, those parcels meeting land use categories, downstream of the Capay Division Dam and within a reasonable proximity to the system were determined by the Assessment Engineer to be properties that benefit from the Proposed Assessment. The Assessment Engineer assigned properties to one of the following connection statuses:

## Currently Connected Parcels:

The District provided a map of the parcels that currently have access to water through a turnout or other facility to receive water from the canal system; these parcels are defined as Currently Connected. The water that can be diverted at a particular parcel depends on specific District facilities that allow water to flow from the District's canal system towards a parcel. These facilities include, but are not limited to, service turnouts, pipe and pump systems, and other infrastructure. Because District records show these parcels are currently connected and receive water from the Services, it is assumed
that each parcel has access to water from the District directly from the canal, primarily fed via gravity, or from the slough system, which may utilize mechanical equipment to extract water. No special proportionality of benefit is afforded based on the type of device used at a parcel because all such connected parcels, regardless of method of delivery, have equal access to the special benefits provided by the Services. All Currently Connected parcels benefit from all Services funded by the Proposed Assessment.

## Potentially Connected Parcels:

The District also identified agricultural properties that cannot currently access the District's water due to a lack of a District facility or distribution device. These parcels, when they are geographically located adjacent to or within the outer reach of the canals system are categorized as Potentially Connected. Potentially Connected parcels receive a special benefit from the Services based on their ability to feasibly access the District's water supply system (i.e.: Infrastructure Availability Services) should they construct a lateral or other distribution device in the future. However, since these properties do not currently receive water from the District, these parcels do not currently benefit from long-term, routine capital replacement and repairs of the systems (i.e.: Routine Capital Improvement Services) unless and until they connect to the District system and become Currently Connected parcels.

## No Connection

The parcels not currently connected to the system and those that cannot reasonably be connected to the system in the future, were given the classification of No Connection. These properties were either upstream of the Capay Diversion Dam, and thus upstream of the canal system or identified as being unable to connect to the system as they are not adjacent to or within the proximity of the canal system. The Assessment Engineer determined that bringing a connection device to these properties in the future was determined infeasible.

## Benefit Factor

As discussed in Section 3, the Proposed Assessment is intended to cover two equally weighted services for agricultural properties: Infrastructure Availability Services and Routine Capital Improvement Services. These two services are equally weighted because they provide equal benefit to the District at large for the long-term functioning of the system. However, as discussed above, not all parcels receive equal benefit from both services. Therefore, the Benefit Factor has been developed to apportion the special benefit each agricultural parcel receives based on its Connection Status. The first step to determining the Benefit Factor was to quantify total Assessed Acreage of each Connection Status:

- Currently Connected parcels benefit from Infrastructure Availability and Routine Capital Improvements Services. The total Assessed Acreage for Currently Connected parcels is 74,961 acres.
- Potentially Connected parcels only benefit from Infrastructure Availability Services. The total Assessed Acreage for Potentially Connected parcels is 18,698 acres.

The second step was to determine the total Assessed Acreage benefiting from Infrastructure Availability and Routine Capital Improvements Services:

- The Infrastructure Availability Service benefits both Connected and Potentially Connected parcels. The total Assessed Acreage associated with this service category is 93,659 acres.
- The Routine Capital Improvements Service only benefits Currently Connected parcels. The total Assessed Acreage associated with this service category is 74,961 acres.

Lastly, the weighted benefit percentage for each of the Services was determined based on the benefit from each Service and the associated Assessed Acreage (Table 3) and then normalized to determine the Benefit Factor (Table 4) for each Connection Status.

As described above, two categories of parcels receive no special benefit from the Services. Parcels with a nonagricultural land use do not benefit from the Services described above and are assigned a Benefit Factor of 0. Also, parcels with a No Connection Status are assigned a Benefit Factor of 0.

## Equivalent Benefit Units

Equivalent Benefit Units (EBU) are the measure of special benefit received by parcels from Services funded by the Proposed Assessment. The EBU for each parcel is calculated using the following equation (Equation 1).

$$
[\text { Parcel EBU }]=[\text { Assessessed Acreage }] \times[\text { Benefit Factor }]
$$

Where:

# Assessed Acreage $=$ Assessor Parcel Acreage $\times \mathbf{8 0} \%$ 

Assessor's Data<br>(Unless otherwise determined by aerial imagery)

Table 5 presents a summary of the total number of parcels, Assessed Acreage and Equivalent Benefit Units by Connection Status.

## Calculating and Separating General Benefits

The Services described above provide a general benefit to the public at large through environmental benefits, including riparian vegetation and habitat in and near the vicinity of the canal system at and downstream of the Capay Diversion Dam. The Assessment Engineer calculated the amount of general benefit based on the footprint of the canal system as an approximation of the area of land that supports the associated environmental habitat in the service area.

The area of the canal system is compared to the overall District's legal boundary to determine a percentage of the total area that receives general benefit. The canal system is approximately 160 miles long with an average width of 30 feet. This results in an area of approximately 582 acres. The District's legal boundary is approximately 218,000 acres. Therefore, resulting percent of area covered by the canal system is $0.3 \%$. This percentage is multiplied by the estimated annual budget to determine the amount attributed to general benefit. This amount is subtracted from the budget used to determine the total amount of the assessment and the remainder is apportioned to the parcels that receive special benefits.

- District boundary: 218,200 acres
- Area of canal system: 160 miles $\times 30$ feet $\approx 582$ acres
- Amount of general benefit as percentage of special benefit area: $0.3 \%$
- Amount of estimate budget attributed to general benefit: $0.3 \% \times \$ 955,000=\$ 2,865$

As described in the following section, the amounts attributed to general benefit will be funded from the District's non-assessment revenue.

## Proposed Assessment Rate

As described above, the annual revenue required to continue to provide the Services is $\$ 955,000$. With the reduction associated with the general benefit apportionment, the Proposed Assessment will fund the remaining $\$ 952,135$. The Proposed Assessment rate per EBU is equal to the remaining required annual revenue divided by the total EBU from all parcels, as shown in Equation 2 and Table 6.

$$
[\text { Assessment Rate per } E B U]=\frac{[\text { Annual Revenue: } \$ 952,135]}{[\text { Total } E B U: 76,831]}=\$ 12.39 \text { per } E B U
$$

## Special Benefit Assessment Calculation

To determine the proposed assessment for an individual parcel, the amount of Equivalent Benefit Units (EBU) for the parcel is calculated based on the methodology described above, and then multiplied by the assessment rate per EBU. All factors to calculate the parcel's EBU can be found in the descriptions provided above.

The proposed assessment for an individual parcel can be expressed by the following equation (Equation 3):
$[$ Calculated Parcel Assessment $]=[$ Parcel EBU $] \times[$ Assessment Rate per EBU $]$

## Assessment Calculation Steps

Using the proposed parcel assessment equation, EBU equation, parcel acreage, and benefit factor, an individual parcel's assessment for either a Currently Connected or Potentially Connected parcel can be calculated.

Step 1 - Determine the parcel acreage from Yolo County Assessor's data.
Step 2 - Determine the Assessed Acreage by using $80 \%$ of the assessor parcel acreage. Round down the Assessed Acreage to the nearest acre.

Step 3 - Determine the Benefit Factor associated with the assigned Connection Status by searching the parcel's APN in Appendix B.

Step 4 - Calculate the Parcel EBU using Equation 1.
Step 5 - Calculate the parcel assessment using Equation 3.
Step 6 - Round down to the closest multiple of $\$ 0.02$.

Assessments are rounded down to the closest multiple of $\$ 0.02$ as required by the Yolo County Assessor's office for submission of the special assessment roll for collection on annual County Property Tax Bills.

## Assessment Tables

Table 2: Assessment Parcels and IIrigable Acreage

| Water Access Status [1] | Total Number of <br> Parcels [1] <br> $[A]$ | Total Irrigable <br> Acreage [2] <br> $[B]$ |
| :--- | :---: | :---: |

## Assessment Equations

Equation 1: Parcel Equivalent Benefit Units

$$
[\text { Parcel EBU }]=[\text { Assessessed Acreage }] \times[\text { Benefit Factor }]
$$

Table 4
Where:

$$
\text { Assessed Acreage }=\text { Assessor Parcel Acreage } \times \mathbf{8 0} \%
$$

Assessor's Data
(Unless otherwise determined by aerial imagery)

Equation 2: Assessment Rate per EBU

$$
[\text { Assessment Rate per } E B U]=\frac{[\text { Annual Revenue }: \$ 952,135]}{[\text { Total } E B U: 76,831]}=\$ 12.39 \text { per } E B U
$$

Equation 3: Proposed Parcel Assessment
[Calculated Parcel Assessment $]=[$ Parcel EBU $] \times[$ Assessment Rate per EBU $]$ Where:
[Assessment Rate per EBU] $=\$ 12.39$

## Example Assessment Calculations

The following examples illustrate the application of the assessment equation to determine the annual assessment for several hypothetical properties.

## Example 1

Consider a 200-acre agricultural parcel located within the District's boundary, within a reasonable location to expect Services from the canal system. The following table provides the assessment calculation factors and steps for the same parcel with different connection statuses.

| Land Use Category | Agricultural |  |  |  |
| :--- | :---: | :---: | :---: | :---: |
| Service Type | Currently Connected | Potentially Connected |  |  |
| Irrigable Acres to Parcel Acres Ratio | $80 \%$ | $80 \%$ |  |  |
| Benefit Factor <br> (From Table 3B) | 1 | 0.1 |  |  |
| $[$ EBU $]=[200$ acres $] \times[$ Irrigable Acres to Parcel Acres Ratio $] \times[$ Benefit Factor $]$ |  |  |  |  |
| Parcel EBU $\quad[$ Calculated Assessment $]=[$ Parcel EBU $] \times[\$ 12.39]$ |  |  |  |  |
| 160 |  |  |  | 16 |
| Calculated Assessment | $\$ 1,982.40$ | $\$ 198.24$ |  |  |
| Proposed Assessment | $\$ 1,982.40$ | $\$ 198.24$ |  |  |

## Summary of Assessments

Appendix B provides a detailed listing by Assessor's parcel number of the maximum assessments that will be voted on by the property owners for the Proposed Assessment. Assessments are rounded down to the closest multiple of $\$ 0.02$ as required by the Yolo County Assessor's office for submission of the special assessment roll for collection on County Property Tax Bills.

## Special Considerations

## Large Properties with Multiple Land Uses

For large parcels with apparent multiple land uses, irrigable acreage has been measured aerially to manually determine the proper Assessment Acreage used to calculate the assessment.

## Public Parcels

Consistent with the requirements of Proposition 218, all publicly owned parcels must be assessed proportionately to the special benefit received from Services provided by the District. Therefore, public parcels are treated the same as privately-owned parcels for assessment calculation purposes. To calculate
assessments for these parcels, a Land Use Category was assigned to each public parcel based on its current use and evaluated accordingly.

## Assessment Exclusions

All parcels within the District receiving a special benefit from Services are within the benefit area of the Proposed Assessment. Parcels that are utilized to provide District Services, such as canals, sloughs, detention ponds, and water infrastructure, are excluded from this assessment.

## Updating the Assessment Roll

Recalculating individual parcel assessments on an annual basis accommodates changes within the District over time. These changes can result from development activity, lot splits/mergers/adjustments, or a change of the Connection Status.

It is recognized that when compiling data for the thousands of parcels that constitute the proposed assessment, the data $^{2}$ used to derive individual parcel characteristics may not be accurate or may not precisely fit the intent of the District thus leading to errors and/or circumstances that result in inaccurate assessment calculations. Where such circumstances are discovered, either by the persons administering the assessment or by the owners of the properties affected, the assessment appeals process described below shall apply.

[^1]
## Section 5. Assessment Administration

## Implementation

## Schedule for Collection

If property owners approve the Proposed Assessment, the District intends to commence collection of the assessment in FY 2023/2024 and continue every year thereafter. Beginning in Fiscal Year (FY) 2023/2024, the District Board of Directors will establish the Assessment Rate per EBU (Assessment Rate) not-to-exceed the maximum approved by property owners. Beginning in FY 2024/2025, the Board will establish the Assessment Rate not to exceed the maximum approved by property owners plus an annual escalation as described below. The Proposed Assessment will remain in effect until terminated by the District Board of Directors.

## Annual Escalation

In order to ensure that the District is able to provide the needed services over time, it is important to increase the Assessment Rate subject to the rising costs of labor and materials over time. The Assessment Engineer has determined that an appropriate escalation factor is reflective of construction labor and materials used for the services provided. Therefore, beginning in FY 2024/2025, the maximum authorized Assessment Rate will be subject to an annual inflationary escalator pursuant to Government Code §53739(b) based on the annual change in the Consumer Price Index February to February CPI-U for San Francisco-Oakland-Hayward, CA, published by the U.S. Department of Labor, Bureau of Labor Statistics, subject to a minimum of 0 percent and a maximum of 4 percent in any given year. The District Board may elect to levy the Assessment up to the maximum authorized Assessment Rate in any given year, based on an annual budget analysis.

## Appeals of Assessments Levied to Property

## Appeals Process

Any property owner who believes her/his parcel should be reclassified, and the parcel assessment adjusted may file a written appeal with the General Manger of the District or her/his designee. Any such appeal is limited to correction of an assessment during the then-current fiscal year and for future years.

All appeals must include a statement of reasons why the parcel should be reclassified and may include supporting evidence. On the filing of any such appeal, the General Manager, or her/his designee, will promptly review the appeal and any information provided by the property owner and may investigate and assemble additional evidence necessary to evaluate the appeal. If the General Manager finds that the individual assessment should be modified, the appropriate changes will be made to the assessment roll. If any such changes are approved after the assessment roll has been filed with the County for collection, the General Manager is authorized to refund the property owner the amount of any approved reduction to the assessment for the then-current fiscal year. In the event that an appeal is filed and a subsequent adjustment results in an assessment reduction, refunds or credits for any prior years' assessments will not be made.

If a landowner disputes the decision of the General Manager, a secondary appeal may be made to the District Board of Directors, which will consider the matter at a regularly scheduled Board meeting. Any decision made
by the Board of Directors shall be final. The District Board of Directors may amend these rules of proceeding for the assessment appeals.

## Impact of Appeals During Formation Period

The data being used by the Assessment Engineer to generate the Assessment Rate defined in the Assessment Methodology section comes from the Yolo County Assessor. While the data from the Yolo County Assessor is assumed to be accurate, its primary purpose is for use by the Yolo County Assessor and is subject to the Assessor's standards for accuracy and frequency of update. Because this data is not maintained by the Assessor in a form designed to support this special benefit assessment effort, the Assessment Engineer has worked to refine the data so that it properly reflects the conditions present in the physical benefit area. The District has provided the Assessment Engineer with the connection statuses for parcels within the proposed assessment boundary; this dataset has been reviewed by District staff for accuracy.

However, throughout the formation period, errors and discrepancies with the data may surface and require modification of the assessment calculation for various parcels. Changes in the data for a particular parcel without a corresponding change in the Assessment Rate established by this report will, by definition, change the total amount of assessment levied and collected. For example, if the data assumes the existence of an orchard and that orchard has since developed into houses, once the database is corrected the rates will generate a smaller total assessment. Due to the database being constantly refined (either through internal review or an external appeal process), it is infeasible to fine-tune the rates between the Preliminary Engineer's Report and the Final Engineer's Report. In addition, because changes to the database will either increase or decrease the total amount assessed, it is presumed that these amounts will roughly offset each other. Therefore, although minor changes to the database will continue to be made during the formation period, the Assessment Rate proposed in this Report will not be adjusted, even though that will result in a total assessment which may be slightly less than or slightly more than the amount determined for the development of this report.

## Future Land Use and Connection Status Changes

It is anticipated that changes in land use and connection status will occur in the District over time. To accommodate for these changes, individual parcel characteristics will be reviewed and updated as needed on an annual basis for determining the individual property assessments in subsequent fiscal years. The annual assessment would increase or decrease depending on the change in land use and/or changes to connection status.

Fallowing of land in a given year will not result in the change in land use for the property assessment. However, if that land is permanently converted from agricultural use, a land use change will be considered.

## Example 1: Land Use Change Resulting in a Reduced Assessment

Assume a 100-acre agricultural parcel Currently Connected is converted into housing.
Land Use: The Land Use Category would change from Agricultural to Residential
Benefit Factor: As a result of the Land Use change, the Benefit Factor would reduce from 1 to 0 .

The assessment for the agricultural parcel, at the current assessment rate, would be $\$ 991.20$. The resulting assessment following the land use change to residential would be $\$ 0$.

## Example 2: Distribution Device Installed Resulting in an Increased Assessment

Assume a 100-acre agricultural parcel within the Proposed Assessment boundary does not currently have a distribution device to extract water from the canal system. Since a distribution device is not present, the parcel does not have immediate access to surface water and is considered Potentially Connected. The property owner decides to install a device to extract water from the canal system.

Land Use: No change.
Benefit Factor: As a result of the connection status change, the Benefit Factor would increase from 0.1 to 1 .

The assessment for the agricultural parcel, at the current assessment rate, would be $\$ 99.12$. The resulting assessment following the connection status change from Potentially Connected to Currently Connected would be $\$ 991.20$.

## Section 6. Conclusion

It is concluded that the proposed assessments do not exceed the reasonable cost of the proportional special benefit conferred on each parcel assessed.

[^0]:    ${ }^{1}$ Silicon Valley Taxpayers' Assn., Inc. v. Santa Clara County Open Space Authority (2008) 44 Cal. 4th 431, 450.

[^1]:    ${ }^{2}$ The Assessment Engineer utilized data compiled from the Yolo County Assessor to determine individual property characteristics used as the basis for apportioning the special benefit. While the data is assumed to be accurate, its primary purpose is for use by the Yolo County Assessor and is subject to the Assessor's standards for accuracy and frequency of update. As a result, the information may be inaccurate and not reflect the actual current property characteristics of every parcel.
